Review of the Results of the ROGEP Market Assessment
Context and Scope of the ROGEP Market Assessment
With funding from the World Bank, ECREEE launched the **Regional Off-Grid Electrification Project (ROGEP)** in 19 countries in West Africa and the Sahel. The project aims to enhance shared capacity, institutions and knowledge in order to increase electricity access of households, businesses and public institutions using modern stand-alone solar systems through a harmonized regional approach.
Geographic Scope

The 19 countries covered by ROGEP (collectively referred to as “West Africa and the Sahel”) include the 15 member states of ECOWAS – Benin, Burkina Faso, Cabo Verde, Cote d’Ivoire, The Gambia, Ghana, Guinea, Guinea-Bissau, Liberia, Mali, Niger, Nigeria, Sierra Leone, Senegal and Togo – plus Cameroon, Central African Republic, Chad and Mauritania.
Off-Grid Solar Market Assessment

Scope of Work/Objectives:

- **Task 1**: Enabling policy and market environment
- **Task 2**: Off-grid solar market assessment
  - Demand [private households, public institutions, productive use applications]
  - Supply
- **Task 3**: Willingness and capacity of national and regional financial institutions to provide financing
- **Task 4**: Models to incentivize private sector and financial institutions to support off-grid solar market development

Two complementary work-streams:

- Least-Cost Electrification Analysis
- Gender Assessment
Methodology
# Data Collection Methods and Tools

## Available Information
- Government statistics (census data, electrification data), energy sector plans (electrification master plan), published reports (GOGLA, World Bank, IEA data) and input from local experts

## Key Stakeholders
- Representatives from government, donor community, NGOs, solar companies, financial institutions, industry associations, academia, community groups and women's groups

## Focus Group Discussions
- Key stakeholders from household, institutional, productive use and supply sectors
- Relevant data and high-level market insights

## Surveys and Questionnaires
- Solicited information from selected target groups (solar companies, financial institutions)

## GIS Data and Analysis
- Datasets on population, settlements, households, public/social facilities (health facilities and schools), electrical grid network, etc.
- Least-cost electrification analysis
Results
World Bank Regulatory Indicators for Sustainable Energy

2017 Ranks among Access Deficit Countries

Average ROGEP score: 46

Highest scoring ROGEP countries:
- Cameroon (69)
- Ghana (67)
- Cote d’Ivoire (67)
- Togo (66)
- Benin (63)
- Burkina Faso (62)

Largest improvement in score between 2015 and 2017:
- Togo (+34)
- Niger (+26)
- Burkina Faso (+22)
- Sierra Leone (+19)
- Nigeria (+18)
- Benin (+14)

NOTE: Cabo Verde, Gambia and Guinea-Bissau excluded from RISE analysis

Source: World Bank RISE Index
Least-Cost Electrification Analysis

Distribution of Settlements by Least-Cost Electrification Option, 2030
By 2023, about 166 million people, 33 million households and an average of 35% of the population across West Africa and the Sahel will be suitable for stand-alone systems. These estimates will decrease to about 60 million people, 11 million households and an average of 16% of the region’s population by 2030.

**NOTE:** Estimate assumes that all grid extensions will be completed through 2030 as planned.

Level of Interest in Off-Grid Markets in West Africa and the Sahel among Major Suppliers

![Graph showing level of interest in off-grid markets across West Africa and the Sahel among major suppliers.](image-url)
Key Barriers to Off-Grid Solar Market Growth

Key Market Barriers:

- Low consumer purchasing power and lack of consumer financing options
- Low levels of consumer awareness and/or misperceptions about the value of solar solutions, particularly in rural areas
- Lack of financing for solar companies
- Lack of enforceable standards and regulation leads to informal sector competition and market spoilage
- Lack of local capacity/qualified technicians to maintain systems
- Insufficient or fragmented market data on consumer electricity needs, usage or experience
- High transaction costs associated with equipment inventory, distribution, importation, taxation etc. (and corresponding lack of policy support/financial incentives)
- Policy/regulatory barriers – many governments have not done enough to disincentivize alternatives/substitutes for solar (e.g. diesel subsidies), which makes solar a less attractive option to consumers
Key Market Drivers:

- Strong off-grid electricity demand – electricity needs are much higher than what national utilities can offer in the short and medium-term
- Increasing demand for consumer appliances that require electricity (e.g. cellphone, radio, TV, refrigerator etc.)
- Government policy/action is generally supportive of the industry, which helps attract substantial/sustained investment to the market
- Growing penetration of mobile money services allows off-grid solar companies to increasingly utilize integrated technology platforms and innovative business models to offer PAYG consumer financing solutions to the market
- Extensive private sector engagement in development of the region’s off-grid sector, with companies adopting new business models and strategies to attract external investment and expand their operations
- Strong donor presence and support from the international development community provides confidence that the market will continue to receive financial, policy and technical support necessary to develop
Key Insights and Recommendations
Key Market Insights

- **Policy & Enabling Environment**: With the exception of a few countries, most countries across the region still have significant room for improvement in development and implementation of supportive policy and regulatory frameworks for energy access.

- **Least-Cost Electrification Analysis**: In 2023, an estimated 33 million households across West Africa and the Sahel (35% of the population) will be suitable for stand-alone systems. By 2030 -- assuming that all grid extensions will be completed as planned -- these estimates decrease to 11 million households (16% of the population).

- **Off-Grid Solar Market Potential**: Countries with largest estimated off-grid solar cash market potential are listed below (figures include demand from household, public/institutional, and productive use sectors):
  - Nigeria ($1.4B)*
  - Ghana ($217M)
  - CAR ($182M)
  - Chad ($125M)
  - Mali ($119M)
  - Cote d’Ivoire ($118M)

  * Nigeria accounts for nearly half of the region’s overall demand ($2.9B)

- **Consumer Financing**: Consumer financing is critical to off-grid solar market growth, as it allows the poorest households to enter the market and those already in the market to afford larger systems. The household sector analysis found that in 2018 the estimated regional financed market potential is more than triple the estimated cash market value in that year (increase from ~USD 900 million to ~USD 2.8 billion).
Summary of Recommendations

✓ Strengthen regional energy access policies and support development of national energy access policies

✓ Adopt regional standards and quality assurance framework for stand-alone systems

✓ Remove trade barriers and simplify tax regime to enhance product affordability

✓ Support development of regional/national certification schemes for solar technicians/service providers

✓ Support development of mobile money sector through harmonization of mobile sector policies, regulations and taxation

✓ Unlock demand through consumer awareness/education and promotional campaigns

✓ Share market intelligence and facilitate stakeholder exchanges

✓ Provide extensive technical and financial support to off-grid solar companies and entrepreneurs to accelerate business growth and/or facilitate market entry

✓ Develop standardized business training materials for off-grid solar entrepreneurs

✓ Deliver customized business acceleration support and TA to start-up and early-stage off-grid solar enterprises
